DETAILED ACTION

Allowable Subject Matter

1. Claims 2-15 and 17-20 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 6 and 20 are allowed due to the reasons set forth in the office action mailed August 9 2007.

Regarding **claim 5**, Zhang et al 20030224830 discloses a portable communication terminal set comprising a radio part for executing radio communication with external sets, a memory part for storing data including image data representing a plurality of images, opposite side party data representing a plurality of opposite side parties of communication, combination data representing the correspondence relation between the image data and opposite side party data, a display part for executing necessary displays, an operation part for accepting operations by the operator, and a control part for collectively controlling the radio part, the memory part, the display part and the operational part, wherein; an image of image data corresponding to a pertinent opposite side party of communication is displayed on the display part under control by the control part in correspondence to at least one of a call arrival in the radio part and the acceptance of operation by the operation part based on combination data stored in the memory part. Ranta 6,751,485 discloses a portable communication terminal wherein the memory part includes a communication history data representing the history of communication executed by the radio part.

The instant invention discloses wherein non-response call arrival history data concerning non-response call arrivals not responded in the radio part and priority order

data defining the priority order of opposite side parties of communication are stored in the memory part under control by the control part, and in the initial stage of non-response call arrival check operation on the operational part, the image of image data among those stored in the memory part and corresponding to the opposite side party of communication of the highest priority order among the opposite side parties of communication among those corresponding to the non-response call arrival history data is displayed, the image having various display sizes based on priority, based on the non-response call arrival history data, priority order data and combination data stored in the memory part. The above novel features in combination with all the recited limitations of claim 5 are neither taught, suggested nor made obvious by Zhang et al, Ranta, or any other prior art of record. Claims 2-4, 7-15 and 17-18 are allowable based on their being dependent on claim 5.

Regarding **claim 19**, Zhang et al 20030224830 discloses a portable communication terminal set comprising a radio part for executing radio communication with external sets, a memory part for storing data including image data representing a plurality of images, opposite side party data representing a plurality of opposite side parties of communication, combination data representing the correspondence relation between the image data and opposite side party data, a display part for executing necessary displays, an operation part for accepting operations by the operator, and a control part for collectively controlling the radio part, the memory part, the display part and the operational part, wherein; an image of image data corresponding to a pertinent opposite side party of communication is displayed on the display part under control by

the control part in correspondence to at least one of a call arrival in the radio part and the acceptance of operation by the operation part based on combination data stored in the memory part, said portable communication terminal set further comprising a camera part for generating image data corresponding to a foreground subject. Ranta 6,751,485 discloses a portable communication terminal wherein the memory part includes a communication history data representing the history of communication executed by the radio part. The instant invention discloses wherein non-response call arrival history data concerning non-response call arrivals not responded in the radio part and priority order data defining the priority order of opposite side parties of communication are stored in the memory part under control by the control part, and in the initial stage of non-response call arrival check operation on the operational part, the image of image data among those stored in the memory part and corresponding to the opposite side party of communication of the highest priority order among the opposite side parties of communication among those corresponding to the non-response call arrival history data is displayed, the image having various sizes based on priority, based on the non-response call arrival history data, priority order data and combination data stored in the memory part. The above novel features in combination with all the recited limitations of claim 19 are neither taught, suggested nor made obvious by Zhang et al, Ranta, or any other prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tagliabue et al 20040017376 discloses graphic entries for interactive directory.
